Your vision

KNOW WHO IS ON SITE

With Visy Touch, contractors sign in and mark the area they will be working in.

Easy registration for contractors and visitors.

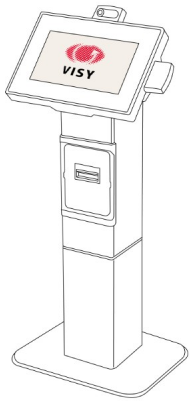

Visy Touch is a transaction checkpoint that controls the flow of contractors and visitors at factories and other industrial sites. Use it to raise your safety level, or simply to give visitors a better experience when they arrive.

Handle safety and security obligations

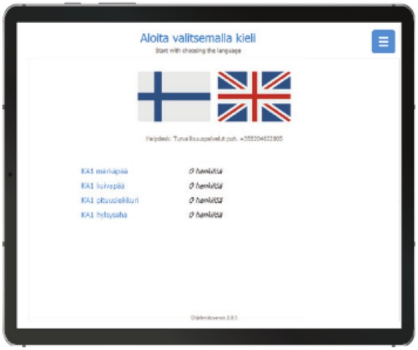

With Visy Touch, you always know which area your contractors are working in. When they sign in, identified visitors and contractor staff indicate their working area and accept the site's safety and security requirements.

Visy Touch is configured to each operator's needs and to where each checkpoint sits. Whatever the use case, it makes operations more transparent and improves safety and security in working areas.

- Transaction checkpoint for visitor access and registration
- Visitor instructions and mandatory safety training
- Flexible configuration options
- Customised applications and user interface
- Identification with RFID, camera and more

A simple interface makes registration easy.

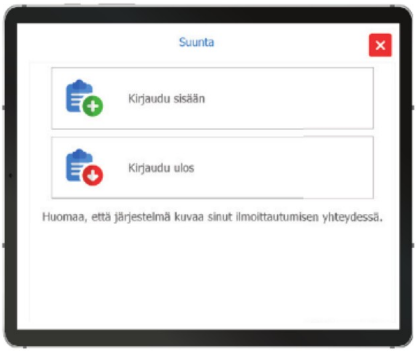

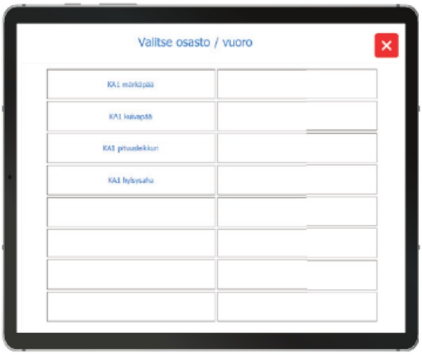

1

Select language

2

Sign in or out

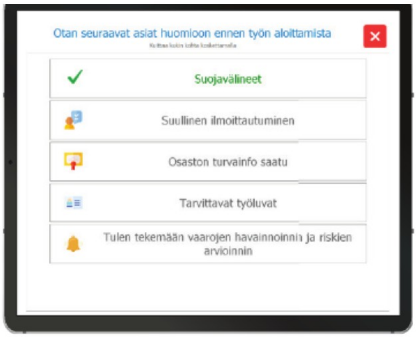

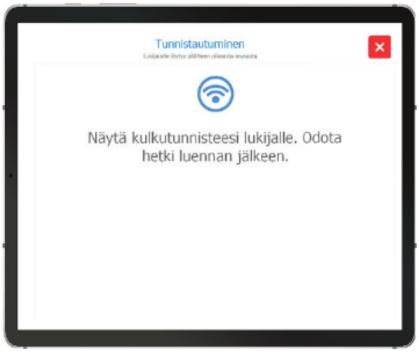

3

Indicate the area you will be working in

4

Acknowledge the safety requirements

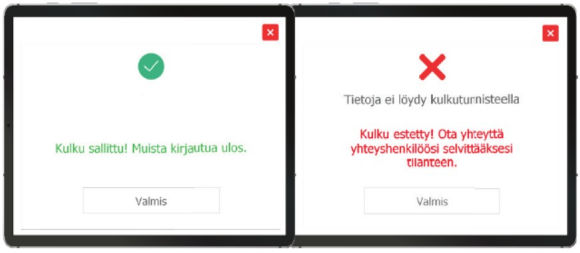

5

Identify yourself with RFID

6

Get a clear result: access granted or denied

Clear steps and on-screen instructions make every sign-in quick, for first-time visitors and regular contractors alike.

Visy Touch comes in three models.

Table model

Wall-mounted model

Floor model

Every model has the same features

- Touch screen
- RFID
- Modular configurations
- Ticket printing
- Camera
- Customised user interface

About Visy

Since 1994, Visy has built systems that capture cargo and vehicle data and control access at ports, terminals, rail yards and industrial sites. License plate recognition and access control have been at the core of Visy from the start. Today, Visy systems handle more than 6,000,000 automation tasks a day in over 30 countries.
